SpaceTEC® Vehicle Processing Exam

The SpaceTEC® Vehicle Processing Certification exam is a three part exam consisting of a 70 question, computer based, written exam, followed by an oral and practical evaluation of an individual's technical knowledge and skills.

The Vehicle Processing examination focuses on the following subject areas: Aerospace Systems, Electronic Fabrication & Fiber Optics, Structural Fabrication, Fluid Systems, and Technical Task Analysis.

The minimum passing score on the written exam is 70% or higher on at least four of the five subject areas listed above. Applicants scoring less than 70% in any of the above subject areas (maximum of two), will be required to pass an oral examination.

The practical section consists of ten practical hands-on exercises which are evaluated by a SpaceTEC® Examiner.
